

# Review of: "Economics of Cattle Fattening - A Case of Bangladesh"

Zakia Himeur

Potential competing interests: No potential competing interests to declare.

- This work allows for good exploitation of the results by the scientific community.
- A more succinct and concise summary and conclusion would be better.
- The authors had the opportunity to focus on the modal, local, and then regional context to present their research work.
- The research methodology is rational.
- The structured delimitation must be representative of the study area.
- The results are reasonably controversial.
- The bibliographic references are quite varied, but it seems to me that the authors have the possibility of enhancing the scientific value of their research work by integrating recently published articles.
