Potential competing interests: No potential competing interests to declare.

The sampling strategy and sample size are clearly stated.

More information is required on:

1. Instrument development.
2. Uptake of the Covid-19 vaccine: how it was measured, like self-report, record review, or both.
3. Abstract results are presented in Odds Ratio (Males are 2.7 times more likely). The discussion section, paragraph 2, is presented as a proportion (high prevalence in females - 29%). It is confusing.
