Dear Sir/Madam,

I have had the privilege of reviewing the above-named manuscript. My comments to the authors are in the reviewed document which is attached to this email. The paper cannot be published as it is. The major drawbacks of the paper are:

1. It is written only by statisticians with little or no Public Health, Paediatric, or Medical input
2. There are many areas where syntax is wrong
3. Repetition of sentences
4. The paper is too wordy for a sample size of just 118
5. Incorrect tenses.
6. Scanty inclusion/exclusion criteria
7. Many sentences are quite irrelevant

The authors need to re-write this paper for it to be presentable for publication. A good job, but it can be made much better and more suitable for reading.
