Potential competing interests: No potential competing interests to declare.

The paper by Pandya and colleagues is a review reporting the antibacterial activity and other properties of some Ganoderma Species.

Review Comments: Insert references in the introduction section. For example the sentence reporting causes of DFU deserve at least two refs.

Although evident from the cited literature, specify in the text whether the percentage of DFU patients (died, amputation etc..) are worldwide statistics

Among the concurrent species infecting feet "Entrobacter" must be corrected.

Check all taxa italic names. For instance Klebsiella taxa species correct name is Pneumoniae with the ae diphthong

I suggest to create a second table reporting the Chemical element, their state and their effectiveness.

The title needs to be changed, in-vitro is not adaptable to a review
