It is an important issue considered by the authors. However, there are some concerns regarding the article that should be addressed.

1. Referencing and sentence structure in the third line of the introduction is not correct (Roberts (2002; 2010) and (McGuinness et al., 2013) indicated ...).
2. The time span considered for searching the databases is not mentioned in the Method section.
3. It is necessary to provide the data charting form which contains the basic information of the included articles and also core results of each study in the form of a table in the main file or the attached file.
4. It is necessary to present the results of thematic analysis in the form of a table.
5. Limitations of the study should be mentioned under a separate sub-heading at the end of the Discussion section.
