NLK wt Allele

National Cancer Institute

Source

National Cancer Institute. *NLK wt Allele*. NCI Thesaurus. Code C90151.

Human NLK wild-type allele is located in the vicinity of 17q11.2 and is approximately 154 kb in length. This allele, which encodes serine/threonine protein kinase NLK protein, plays a role in cell fate determination, bone marrow cell differentiation, phosphorylation of transcription factors and Wnt signaling.
