Potential competing interests: No potential competing interests to declare.

This study examined the consumption of water and other beverages among school students in Riyadh, Saudi Arabia. **This manuscript can be accepted if the authors could include the following points.**

1. Provide data tables which are mentioned in the text.
2. Cite references for Statistical Package for the Social Sciences (SPSS) version 25.0 and Institutional Review Board of King Fahad Medical City.
3. The Conclusion section states that the consumption of soft drinks should be increased along with mainly tap water. What about the caffeine content in soft drinks, such as Coca Cola? That part needs to be addressed in the Discussion section.
