**Potential competing interests:** No potential competing interests to declare.

The description of the problem is clear, where rapid urbanization is bringing great challenges to infrastructure and urban spaces, and here CPTED comes as a powerful tool to address these challenges.

The authors of this study use a wide range of research methods, including quantitative surveys, qualitative interviews and field observations to discover how CPTED practices affect urban life in the two neighborhoods studied. Through these methods, they present how various physical and social factors affect urban livability and safety.

At the end of the text, it is summarized that CPTED is an approach to crime reduction - it is a tool that promotes sustainable urban environments focused on community involvement.

This paper encourages collaboration and the use of lessons learned from research in creating safe and prosperous cities for all.
