Potential competing interests: No potential competing interests to declare.

The following are my observations regarding the publication.

1. The introduction could be more concise.
2. Elaborate and specify on the parameters used for sample size calculation.
3. Including a proportionally higher number of representatives from the media could lead to bias.
4. Elaborate on how recurrent themes were arrived at from expert interviews conducted.
5. The methodology states that both quantitative and qualitative analyses were used, but the results contain only descriptive (qualitative) data.
