Potential competing interests: No potential competing interests to declare.

The author establishes some fixed point results for contractive-type mappings in cone metric spaces.

I read the manuscript carefully and patiently. Also, I rebuilt most of the calculations, and I found that they are correct. The topic of this manuscript can be interesting for readers.

It is preferable for the researcher to apply the fixed point theories that were proven in this research to prove the existence of solutions to different types of equations, such as ordinary differential equations, integral equations, and others.

In the introduction section, the researcher did not mention the work of researchers within the field of the fixed point and its applications...it is better to mention them.

Furthermore, the future scope is missing, which could be included in the conclusions section.
