

# Review of: "Different pattern of menstrual in patients with COVID-19 infections"

Mehjabin Mahfuz<sup>1</sup>

<sup>1</sup> International Centre for Diarrhoeal Disease Research, Bangladesh

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

1. First off, I think the title needs to add the word 'pattern' after menstrual. Otherwise, the title does not define anything.
2. I have slight disagreement with the first sentence. The Sars-Cov-2 was not identified in 2019, but much before that. I was first detected in humans and reached pandemic proportions. Please check
3. The paper needs overall review grammatically by the editors.
4. The statistical analysis could be more robust rather just chi-square. This paper would be stronger with a multivariate analysis.
5. Overall, this paper touches an important topic. However, there is room for significant improvement in terms of writing and analysis. If the authors want, I would be happy to help.
