

Review of: "Application of Data Mining Combined with K-means Clustering Algorithm in Enterprises' Risk Audit"

Saja Taha Ahmed¹

¹ College of Science, Baghdad University

Potential competing interests: No potential competing interests to declare.

1. The research adds no novel insights (i.e., there is no or weak contribution).
2. The related work was presented badly and did not address the improvements and shortcomings in the suggested procedure.
3. The study does not include a detailed explanation of the preprocessing procedures or the dataset's characteristics.
4. The results and discussion do not explain why the suggested method outperforms the other analyzed algorithms. The "Results and Discussion" section has to be entirely redone.
5. On page 4, the title "III. Construction and analysis of risk audit evaluation of e-commerce enterprises based on DM technology," this title's words must be capitalized.
6. Future insights for additional effort must be included in the conclusion section.
