I appreciate you asking me to write a review. The research team behind the paper "Antimicrobial Sensitivity of Plant Extracts of *Acacia arabica*, *Prosopis juliflora*, *Abutilon indicum*, and *Bryonia laciniata* on *Staphylococcus aureus*, *Pseudomonas aeruginosa*, and *Escherichia coli*" has demonstrated the antimicrobial effects of some plants on both gram positive and gram negative bacteria.

- a. . The paper needs to be thoroughly rewritten to improve the English and make the messages' contents as clear as feasible.
- b. . Describe your conclusion in the abstract in more detail.
 - Check the plant nomenclature at www.worldfloraonline.org because there are mistakes in there.
- c. .The prepared substances don't have complete chemical characterization.
 - .Positive and negative controls are necessary to verify the findings since ethanol has a significant antibacterial effect even at low doses.
 - Incorporate latest research findings to highlight the manuscript's contribution and up-to-date relevance.
- d. .Describe the rationale for the selection of particular plants and their relevance to current drug discovery efforts.
