Potential competing interests: No potential competing interests to declare.

The authors have done very extensive research work.

I have a few observations

- gram-positive: write G capital letter as it is one scientist's name
- Compound 3 NMR data is missing
- Authors have synthesized many compounds. However, the interpretation of spectral data is missing.
- Structure-property relationship could have been discussed in depth.
- Authors could have given more insights for Antibacterial studies by comparing the structures with reasons.
- A more detailed discussion of the importance of the results obtained in order to draw the electronic and structural information (effect of various groups) and then explain the chemical and biological behaviour of synthesized compounds.
- I could not find any supplementary data for Spectra, (diagram)

The manuscript may be published after minor revision, as indicated above.
