Potential competing interests: No potential competing interests to declare.

I realize that the issue of wastewater production and treatment is specific in India, the article contains an overview of possible methods of wastewater treatment, it contains a lot of valuable information, but very often the wrong terms are used (e. g. 3.3.3. Pollution and Treatment), probably due to incorrect language proofreading. I encourage the authors to consult the content of the article with an expert in the field of wastewater treatment.

The article is organized chaotically, the methods of wastewater treatment do not follow each other logically. For example, chapter 3.3 Nanocomposite membrane is followed by 3.3.1 Algal Technology; 3.3.2. Cyanobacteria.....

I recommend a thorough revision of the article
