**Potential competing interests:** No potential competing interests to declare.

The article entitled "In-Vitro Antibacterial Activity of some *Ganoderma* Species: A Review" describes the antibacterial activity of different species of *Ganoderma* fungi, with particular attention to infections related to diabetes ulcers.

The topic is interesting, and the references used by the authors are relevant and up to date.

Few observations:

1. It is not clear if Arora is the only author. What is the role of the remaining 2 names, Pandya C. and Mathur F.?
2. Proofreading is needed to remove the numerous typos: missing spaces, unneeded capital letters, missing punctuation, subscript numbers.
3. The authors should eliminate repetitions and redundancies: i.e., in the abstract or in the first paragraph.
4. *Ganoderma* should be written in italics in the title.
5. Pictures and images are needed to improve the graphic side of the manuscript.
6. A reduced interconnection was perceived between the different sections of the manuscript.
