Pyridoxine-dependent epilepsy

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Pyridoxine-dependent epilepsy. ORPHA:3006*

Pyridoxine-dependent epilepsy (PDE) is a rare neurometabolic disease characterized by recurrent intractable seizures in the prenatal, neonatal and postnatal period that are resistant to anti-epileptic drugs (AEDs) but that are responsive to pharmacological dosages of pyridoxine (vitamin B6).
