Tumor Necrosis Factor Receptor 1-Associated Periodic Syndrome

National Cancer Institute

Source

National Cancer Institute. *Tumor Necrosis Factor Receptor 1-Associated Periodic Syndrome*. NCI Thesaurus. Code C119051.

An autoinflammatory disease caused by mutations in the TNFRSF1A gene coding for tumor necrosis factor receptor 1 (TNFR1). This results in attacks of fever, rash, peritoneal, pleural, or pericardial serositis and/or synovial inflammation along with increased acute phase reactants. Complications may include amyloidosis.
