**Title: Perceptions and Attitudes about COVID-19 Vaccines Regarding Vaccine Intention and Hesitancy of Attendants of a Healthcare Center in Northern Cyprusb**

This study addresses an important topic related to COVID-19 Vaccines. Nevertheless, I have some comments in this particular study I would like to address.

Comments in the article which needs clarification, rewrites and/or additional information

## Methods:

- The data collection tool was a questionnaire designed by the researchers: what about the validity and reliability of the questionnaire? study participants, numbers of the participants and methods of their recruitment in the study?

## Results:

- Where are the Results of table3 on the table? Where the results text for table 4? Please revise
- I got the COVID-19 vaccine because it is mandatory/Correct knowledge of COVID-19 fatality rate/Correct knowledge of COVID-19 incubation period (these results were significant according to table 4) where is inthe result?
- The author mentioned in the methods section "The next section comprises 18 questions about the participants' perceptions and attitudes of COVID-19 vaccination. This section covers questions on vaccine intention, acceptance, concern about vaccines, vaccine hesitancy, and also the sources of information about vaccines" where is the table that express this data?
- Write the limitation of the study

I hope that the above comments and suggestions may be helpful for you
