

Review of: "Uncovering Insights Into the Bio-Efficiency of Zingiber Officinale Roscoe: Understanding Components That Contribute Significantly to Ginger's Anti-inflammatory and Antioxidant Potential in Relationship With Modern Drying Methods"

Abdullah Mohammed Naji

Potential competing interests: No potential competing interests to declare.

Warm greeting, sir

I have read the article more than once and found the following:

1. From the article, I saw that the title was not quite appropriate. Therefore, it is better to change the title of the article to: Anti-inflammatory and Antioxidant Potential of Ginger Rhizome Extracts (*Zingiber officinale* Roscoe) Affected by Two Modern Drying Methods.
2. While the study appears to be sound, the language sometimes is unclear, making it difficult to follow. I advise the authors to work with a writing coach or copyeditor to improve the flow and readability of the text." Typos, spelling, grammar, and phrasing issues.
3. The study fails to address how the findings relate to previous research in this area. The authors should rewrite their title, methods, discussion, and conclusion to reference the related literature, especially recently published work. Alternatively, the authors should include more information that clarifies and justifies their choice of methods."
4. ABTS radical scavenging capacity and nitric oxide scavenging activity analyses must be added to the methods section. Also, the technical details should be expanded and clarified to ensure that readers understand exactly what the researchers studied."

Good luck!

Dr. Abdullah Mohammed Naji
