Guanine Nucleotide-Binding Protein G(s) Subunit Alpha Isoforms Short

National Cancer Institute

Source

National Cancer Institute. *Guanine Nucleotide-Binding Protein G(s) Subunit Alpha Isoforms Short*. NCI Thesaurus. Code C126519.

Guanine nucleotide-binding protein G(s) subunit alpha isoforms short (394 aa, ~46 kDa) is encoded by the human GNAS gene. This protein plays a role in the activation of adenylate cyclase activity.
