

# Review of: "[Viewpoint] World Immunization Week: Immunization of Healthcare Workers – A reminder"

Laurène Peckeu-Abboud

Potential competing interests: No potential competing interests to declare.

This is a clear and well-written viewpoint that highlights the importance of protecting the HCW population through vaccination. I am wondering how diseases included in table 1 were selected? In my opinion adding the following ones, for which vaccination is recommended (if not mandatory) for HCWs, will be useful: hepatitis A, pertussis, tetanus and poliomyelitis. Authors could also include in table 1 the vaccination recommendations for healthcare personnel in Europe. Those can be found in this article: <https://doi.org/10.1016/j.vaccine.2019.09.061>

As some colleagues already suggested, I would add some numbers regarding the level of immunization or vaccine coverage reached among HCWs globally.

Finally, it will be interesting if authors consider summarizing the current strategies in place to achieve higher vaccine coverage in HCWs (for example: co-administration of vaccines).
