Potential competing interests: No potential competing interests to declare.

The article provides a comprehensive analysis of the Russian patent landscape in the context of the Ukrainian situation and global economic sanctions. The abstract introduces the subject matter adequately, but there is room for improvement in articulating the specific academic contribution and the unique angle this study offers to the existing literature.

The language employed is generally academic, yet certain sections could benefit from a more refined and concise construction. Precision in language use would enhance the overall clarity and impact of the manuscript. Additionally, maintaining a consistent tone and terminology throughout the text is crucial for reader comprehension.

The methodology section offers a brief overview of the research design but lacks in-depth explanations of data collection processes and potential limitations. A more rigorous methodological exposition would strengthen the credibility of the study, ensuring that readers can assess the validity and replicability of the research.

Data presentation is a notable strength, providing valuable insights into the patent landscape over the last decade. However, the article could benefit from the incorporation of visual aids such as graphs or charts to enhance the reader's understanding, particularly in the Results and Trends sections.

In discussing trends, the article successfully highlights the observable decrease in patent applications by foreign entities in Russia since 2018. However, a deeper exploration of potential reasons behind this trend would add depth to the analysis. Consider delving into economic conditions, changes in corporate strategies, or other relevant factors shaping this downward trajectory.

The analysis of sanctions and Russia's new laws is comprehensive, but the article would benefit from a more detailed examination of the specific provisions of these laws. Clearly outlining how these regulations directly impact patent rights and applications would strengthen the argument.

The conclusion touches upon potential future scenarios, but there is an opportunity to expand on this. Consider exploring various outcomes based on geopolitical developments and their potential impact on Russian and foreign entities. This foresight adds depth to the academic discussion.

Finally, the article's academic significance is acknowledged, particularly in its comparison to previous patent system changes in other countries. Emphasizing the unique aspects of the Russian situation and its implications for the broader academic discourse would further enhance the article's contribution to the field.

In terms of plagiarism, the article appears to be appropriately sourced. However, a thorough review using plagiarism detection tools is advisable before submission to ensure complete adherence to academic integrity standards.
