Potential competing interests: No potential competing interests to declare.

Congratulations to the authors for conducting an interesting study. I have some observations on some matters presented in this manuscript for improvement.

Please provide further details on the process of categorizing the severity of visual acuity in this study.

In the methodology section, please provide detailed explanations for both the dependent variable and all the independent variables that have been utilized.

There is a discrepancy in the sample size, as the recommended sample size was 424; however, the results section indicates the inclusion of 624 participants. Please briefly explain this inconsistency.

Kindly elaborate on the inherent strengths of this study.

The depth of the discussion seems inadequate, and we kindly request a more comprehensive expansion. Please offer thorough explanations, supported by relevant references, to enhance both the comprehensiveness and justification of the discussion.

Please thoroughly explore how the conclusions are based on the research outcomes and provide detailed explanations of the proposed strategies to address the identified issues.
