Potential competing interests: No potential competing interests to declare.

1. Please underscore the scientific value added to your paper in your abstract and introduction.
2. There is no drawing of the network architecture used in object classification (the snake).
3. A critical and helpful overview of the published literature on the research problem should be included in the paper.
4. A few grammatical mistakes require correction.
5. The paper needs more citations.
6. No comparisons are made between literature reviews that address the same research problem.
7. It is advised that the Conclusion be rewritten because its organization is not good.
