This paper explores an interesting topic, focusing on the complexity and responsiveness of agile leadership. It is suggested that the author's team supplement the quantitative model and analyze the mechanism in depth. For example, by means of empirical models, the agile leadership construct itself can be disassembled. The introduction adds the theoretical basis and explores the functional correlation between agile leadership and response based on the existing research. In particular, it is necessary to enrich the data sources of well-known journals in the past five years.
