The structure of the abstract needs correction. The type of study, the method used and the results are ambiguous.

Page 2- the first paragraph needs to reference.

Page 2- the second paragraph needs to reference. The third and fourth paragraphs also need to be referenced.

In the page3 the authors mentioned "Some studies have established the links between ESG standards and return on investment in the context of developed countries." Which countries? Kindly provide reference.

In the first section of this paper the understudied gaps are unclear.

In the second part, the authors report the published data from different sources. Without further analysis. How does this data differ from the original source data? What does it add to readers?

The third part was not properly organized. In this part, the type of study, data sources, data collection method, and analysis methods must be mentioned in simple language.

The finding must start with simple results and continue with the more complex results.

Tables may be difficult for non-statistical readers to understand. Therefore, it is necessary to express the results in simple language.

It is better to use two digits after the decimal point.
