Thank you for conducting this study. It appears that a significant amount of fieldwork and data analysis was involved. However, I believe that the use of only 20 plots may not be sufficient for accurate mapping and suggest that a minimum of 100 plots should be considered for more comprehensive sampling. Additionally, I suspect that the high level of accuracy achieved in your results may be due to overestimation resulting from the limited sample size. Therefore, I recommend increasing the sampling size to improve the reliability of the findings.
