# Complete Trisomy 13 Syndrome

National Cancer Institute

## Source

National Cancer Institute. *Complete Trisomy 13 Syndrome*. NCI Thesaurus. Code C101223.

A syndrome characterized by the presence of three complete copies of genetic material for chromosome 13, instead of the normal two. It leads to a variety of abnormalities that include mental retardation, microcephaly, low-set ears, eye structural defects, polydactyly, and limb abnormalities.
