Review on Women Education in Ethiopia

Rewrite the abstract by removing titles and condense the abstract part

Introduction/background part of the study is so good but it needs more improvement by adding the gaps and purpose of the study. Additionally, there is no hypothesis or research question which can indicate the scientific procedure of the study.

There is no clear research design and approach. This requires rearticulation of research design and approach. Other than these, the variables, sample, data sources and other methodological sections are so good.

The ordinal logistic regression model is best suited for this paper. I found it good.

The analysis with triangulation and conclusion part is good but needs the way forward /recommendations.

Finally, rewrite the reference part based on specific referencing style either APA or Harvard or others
