It turned out that the paper is outside of my exact expertise (the Special Composition Question, the main authors cited in the text), but I did what I could. I added comments inside the file.

I think the paper needs some explication and specification as to what its aim is, why this kind of discussion is relevant in the contemporary situation where special sciences have long taken over the task of learning empirically about the world and its constitution (I have written these in the first comment in the file). So I suggest at least some corrections before accepting it.
