Sfh1

National Cancer Institute

Source

National Cancer Institute. *Sfh1*. NCI Thesaurus. Code C19860.

Sfh1 is a subunit (of unknown molecular function) of the abundant RSC complex, a fifteen-protein nucleosome/chromatin remodeling complex related to the SWI/SNF complex. Involved in chromatin modeling and cell cycle progression, Sfh1 is an Snf5p homologue with similarity to Sec14p. (from SGD S0004313 and NCI)
