Potential competing interests: No potential competing interests to declare.

The paper deals with the cement soil stabilization of soft soils by adding sand and additives to the soil-cement composite.

It is an interesting and good paper, which will be useful for engineers.

## Comments:

1. There is a lack of literature review and references in the manuscript.
2. The inclusion of more international references will improve the paper.
3. Standards for sample preparation and test methods are missing.
