Potential competing interests: No potential competing interests to declare.

The paper presents interesting research on students' attitudes and perceptions toward statistical literacy in a university system.

## 1. Introduction

Students' attitudes are well defined in theoretical frameworks, and it is interesting to find out more about the perceptions variable, as well as the relationship that can be found between them in different research on the subject.

## 1. Methods

In the methods, the information about the university location is not needed because it does not have a correlation with students' attitudes and perceptions. It is important to describe the number of population so we are sure about the representativeness of the research sample. It is also important to describe the validity and reliability of instruments.

## 1. Results and Interpretation

The data of the research is well organized, but it is interesting to know the limitations of this study.

## 1. References

Some out-of-date references. It would be more interesting if you used up-to-date references no more than 5 years old.
