The problem handled in thos paper is really interesting.

In the Introduction, the authors should cite and discuss the relevant literature concerning the problem at hand.

For the solution of the problem, the branch and bound algorithm has been used. I suggest that the authors should describe the algorithm and discuss about why this algorithm is selected to be used. A comparison with another algorithm would also be valid. More emphasis should be given on the innovation of the proposed approach, both in the introduction and in the conclusion to highlight the validity of the work.

I suggest that the paper should be published after minor revisions.
