Potential competing interests: No potential competing interests to declare.

Abstract of the paper:

The study assesses the role of national and state institutions in shaping Nigeria's economy, highlighting their positive contributions in policy coordination, resource management, infrastructure development, revenue allocation, and capacity building.

The qualitative research approach and document review provide valuable insights into the mechanisms and dynamics through which these institutions impact Nigeria's economy, emphasizing the importance of effective governance and institutional frameworks in driving economic growth and development.

Practical Implications of the Paper:

National and state institutions in Nigeria have a positive contribution to the country's economic development, particularly in policy coordination, resource management, infrastructure development, revenue allocation, and capacity building.

Effective governance and institutional frameworks are crucial for driving economic growth and development in Nigeria.

By harnessing the strengths of these institutions and implementing supportive policies, Nigeria can leverage their positive contributions to foster economic growth, promote equitable development, and improve the well-being of its citizens.

Policies should focus on addressing conflicts between national and state institutions, establishing conflict resolution mechanisms, and developing clear guidelines and frameworks for resolving jurisdictional disputes or conflicting policy priorities.

Policies should also address the issue of revenue allocation between the federal government and state governments, ensuring a fair and equitable distribution of resources.

Possible Shortcomings of the Study:

The study relies on qualitative research methods and document review, which may limit the depth and breadth of the analysis, as well as the ability to establish causal relationships between national and state institutions and Nigeria's economy.

The sample size of 10 research articles may not be representative of the entire body of literature on the role of institutions

in Nigeria's economy, potentially leading to a biased or incomplete understanding of the topic.

The use of secondary research articles for data analysis through document review introduces the possibility of biased, incomplete, or outdated information, requiring researchers to critically evaluate the reliability and validity of the collected data.

The study does not employ econometric techniques to estimate the data, which may limit the ability to quantify the impact of national and state institutions on Nigeria's economy.

Suitability for Publication

Given that the study provides valuable insights into the role of national and state institutions in shaping Nigeria's economy, highlighting their positive contributions in various aspects of economic development.

The researchers employed qualitative research methods and document review, which offer a comprehensive understanding of the mechanisms and dynamics through which these institutions impact Nigeria's economy.

Also, it acknowledges the limitations of document review and emphasizes the need for researchers to critically evaluate the reliability and validity of the collected information.

The findings contribute to a better understanding of the importance of effective governance and institutional frameworks in driving economic growth and development in Nigeria.

The study's methodology is transparent, and the researchers justify their methodological choices, addressing potential limitations or biases.

Therefore, I recommend that the study be published once the issues pointed out in the shortcomings.
