**Potential competing interests:** No potential competing interests to declare.

This is a very good popular science article. The article describes the relationship between quantum entities and time in popular language, the historical description is very clear, and the discussion is also very clear, but the references are too few. I agree to publish this article, but the author should make the following changes:

1. Add references.
2. Relatively poor academic, more like popular science articles.
3. The conclusions should be clearer.
