The topic is interesting Optimised solution for WAN in IoT. However the paper lacks the contribution and author is advised to add more details about the paper main contribution. Second thing is the there is a lot of extra theory added and results part is short.

The conclusion is too short and not relevant to the paper it seems like author has just write the basic theory about LPWANs. The conclusion must be recitified before final publication. It must include the proposed model, its accuracy, comparison with other's work and limitation and future recommendations.
