Potential competing interests: No potential competing interests to declare.

This new version of the manuscript is almost the same as the previous one, since the authors have not deemed it necessary to perform any changes to address the criticisms and suggestions I raised in the first submission. Therefore, my overall comment remains the same: in my opinion, the reported anecdotal findings based on the subjective feelings of a single patient do not suffice to demonstrate that the described soft laser treatment may actually be a useful therapeutic approach to attenuate sleeping disorders.
