AMH wt Allele

National Cancer Institute

Source

National Cancer Institute. *AMH wt Allele*. NCI Thesaurus. Code C101736.

Human AMH wild-type allele is located in the vicinity of 19p13.3 and is approximately 3 kb in length. This allele, which encodes Mullerian-inhibiting factor protein, is involved in the morphogenesis of the reproductive system. Mutation of the gene is associated with persistent Mullerian duct syndrome.
