Potential competing interests: No potential competing interests to declare.

- What is the resolution and accuracy of the satellite image used in the study?
- Standard consumption requirements in the region are 250-300 liters per day per person. How much is this value in Egypt? The research was based on the fact that 276 liters per day per person is considered very high and concluded that there are losses in the network.
- The period for completing the study refers to 2010. Why did the researcher not take into account updating his data and evaluating the network based on the updated data?
