Dear publisher, the research topic is good and important for achieving competence in architecture, and the theoretical part of the research paper is good, but I have some observations

1_ The theoretical part needs to be shortened.

2_ The research methodology and method of measurement are not clear.

3_ The results, conclusions, and method of measurement are not objective and may contain some bias and subjectivity.

4_ I suggest using the indicators in Table 2 and applying them to a number of architectural offices, counting the results, and then indicating the areas of strength and weakness through a questionnaire or using other research methods.

Best wishes,
