Review of: "AI in Court: Facing Today's Legal Challenges"

Loveleen Gaur

Potential competing interests: No potential competing interests to declare.

I congratulate the authors for selecting the timely topic. The manuscript is a comprehensive overview of key legal issues related to AI, including liability, bias, privacy, intellectual property, etc. It discusses the impact of past legal cases involving AI and lessons learned. It also highlights approaches by governments and companies to address AI legal challenges. It covers ethical considerations around accountability and responsible AI development. Well-structured sections with a logical flow. However, there are a few suggestions for improvement:

- Strengthen the introduction to highlight the relevance and importance of the topic.
- Reduce repetition in the sections discussing past cases and their impact.
- Include more real-world examples and case studies to demonstrate the legal challenges.
- Expand the conclusion to recap major takeaways and implications.
- Add perspectives from legal experts and ethicists to provide more authoritative insight.
- Consider framing the issues more from a forward-looking standpoint on how to address challenges.
- Discuss potential solutions and best practices companies can implement.
- Provide a balanced perspective on risks as well as opportunities related to AI and law.
