Predominantly Diffuse Follicular Lymphoma with 1p36 Deletion

National Cancer Institute

Source

National Cancer Institute. *Predominantly Diffuse Follicular Lymphoma with 1p36 Deletion*.
NCI Thesaurus. Code C138186.

A predominantly diffuse, low-grade follicular lymphoma. It often presents as a large localized inguinal mass, lacks BCL2 rearrangement, and is associated with 1p36 deletion.
