

# Review of: "Assessing the Impact of COVID-19 on Food Consumption Preferences"

Zhengqing Zhou

**Potential competing interests:** No potential competing interests to declare.

This paper assesses the Impact of COVID-19 on Food Consumption Preferences in Kira Municipality, Wakiso District, Uganda. The topic is interesting. However, the paper needs to revise before publishing.

1. **Abstract.** The abstract should precisely and concisely address the whole context. The author should focus on the motivation method and the conclusion of the research. There are some irrelevant contents (especially in the first sentences).
2. **Introduction.** The author spends too much to address the reach background rather than the contribution and the correlation to the literature.
3. **Materials and Methods.** The sample size is too small to support the conclusion. Besides, the simple before and after comparison includes lots of noise that might affect the robustness.
4. **Others.** Some reports address that the typical symptom of COVID-19 is loss of taste. The sense of taste might be important factor to the Impact of COVID-19 on Food Consumption Preferences.
