Potential competing interests: No potential competing interests to declare.

The manuscript is well-written, but there are some feedbacks:

The paper title used the word "New Method," but there is no explicit description of the new method developed in this paper. The newly defined methodology should be clearly stated.

The time duration for analysis is 7 months. The comparison analysis would be more visible if past years' data were also considered.

Under the title 3.5 Potential Water Consumption for Grass Irrigation, there is no explanation or description. Either the title should be removed, or the relevant content should be added.
