

# Review of: "Strong Machine Learning: a Way Towards Human-Level Intelligence"

Gurmohan Singh<sup>1</sup>

<sup>1</sup> Centre for Development of Advanced Computing

**Potential competing interests:** No potential competing interests to declare.

1. Title needs to be redefined.
2. Use of "I" to be avoided in Abstract.
3. In-depth discussions are not presented. Being a review paper, the cited references are very few. Many references are from one source. There should be diversity in references, and the focus should be on papers from the past 10 years in this domain.
4. No novelty is presented. How strong machine learning could be implemented in real time using existing or new approaches, using a few specific examples, is missing from the manuscript?
5. Manuscript needs to be reviewed by a native English speaker. There are many grammatical & typographical errors. Use of "I" and "we" to be avoided.
6. No strong machine learning model is proposed.
7. Specific parameters of strong machine learning algorithms are not defined.
8. Elaborate on the methodology for implementation of strong machine learning in terms of algorithms, tools, or frameworks to be used.
9. The paper needs major revisions.
