Implantation Tablet Dosage Form

National Cancer Institute

Source

National Cancer Institute. *Implantation Tablet Dosage Form*. NCI Thesaurus. Code C149567.

Solid sterile preparation prepared by compression of a solid active substance as such or of a formulation thereof into an implant of a size and shape suitable for implantation, usually subcutaneously. Each implantation tablet is presented in a sterile container. Implantation tablets are intended for release over an extended period of time in order to obtain local or systemic effect.
