Potential competing interests: No potential competing interests to declare.

First of all, I believe that the article will contribute to the literature in terms of originality. I have a few points to say:

1-Do you think optimal conditions are sufficient for measuring TA? Is it correct to take measurements only from the left arm?

2- Why do you share 130/70 as the goal in systolic diastolic pressure?

3- Regarding optimal measurements "Discerning the relationship between left ventricular geometry, high-sensitivity troponin T, and nondipper hypertension

Blood pressure monitoring" you can benefit.

4- The first part of the discussion should include your own findings.

5- In the discussion section, you should compare your own findings with the literature. "The effect of coronavirus disease 2019 on cardiovascular diseases. Arquivos brasileiros de cardiologia." you can benefit.
