Potential competing interests: No potential competing interests to declare.

- **The Abstract:** Conclusion: the authors need to mention what is their take-home message.
- **Introduction**

- The introduction needs to provide the importance of the issue from general to specific, begin with general approach and worldwide to Africa and then to Kenya.

- **For the methodology section**

- The authors should further describe how was the sample size? Were there any exclusion? Inclusion criteria should be stated. Were participants selected sequentially, randomly? Some justification is required.

- Is there a pre-survey and evaluation of the questionnaire? What was the reliability and validity of the tools pre-tested?

- What measurement do you take for those infected livestock and human?

The conclusion section should closely be linked to the results of the study.

I would suggest using APA referencing style.
